Subject: RE: Fruitland Magnesium Fire, Maywood CA - Solid Waste Disposal Coordination

Hi Mustafe –

I spoke with Peter Oda from the County LEA today and they are aware of the site, that EPA is working with CalRecycle to address solid wastes, and that county landfills are anticipated for disposal. Peter did not elicit any specific concerns from the LEA at this time. So, we have established a point of contact within the LEA should any questions from a facility arise.

Please let me know if there any other specific questions you would like to see the LEA address.

Thank you,

Jason,

Please let us know the outcome of your discussion with the LEA as soon as you can. Our contractor will need to identify the disposal location for his cost estimation as part of the trucking cost.

Also, Steve forwarded the EPA access agreement to our counsel for his review. We will let you know as soon as we hear from him.

Regards,

M

Subject: Fruitland Magnesium Fire, Maywood CA - Solid Waste Disposal Coordination

Hello Gerardo –

Charlene Contreras gave me your name as a contact within the county LEA to coordinate with regarding the cleanup of an industrial property in Maywood, CA. The site was the subject of an emergency response by EPA in coordination with LA County Fire and the Department of Public Health Environmental Health Division.

The site includes hazardous and non-hazardous wastes; EPA has authority to address the hazardous wastes. We are working with CalRecycle and their southern California cleanup contractor to address non-hazardous solid wastes at the site. Working with the LEA to ensure that potential disposal facilities in LA County are assured of regulatory approval for the disposal

of materials from the site will greatly assist the timeliness of cleanup actions.

Please call me at the number below to discuss this cleanup project. We are looking to begin work in mid-October and it would be ideal to have solid waste disposal considerations squared away before then.

I look forward to speaking with you.

Thank you,
